Professional Summary

Computer Science undergraduate at MSIT Delhi with hands-on experience in AI/ML engineering and LLM safety research. Currently interning at DomAIyn Labs, focusing on adversarial robustness and red-teaming of large language models. Passionate about building end-to-end intelligent systems spanning NLP, computer vision, and RAG-based applications using Python and modern deep learning frameworks.

Education

Maharaja Surajmal Institute of Technology — New Delhi, India
Bachelor of Technology in Computer Science and Engineering — *2024 – 2028*

- GPA: 8.46/10

Experience

DomAIyn Labs — Remote
AI/ML Intern — *April 2026 – Present*

- Working on AI safety/Governance and robustness of Large Language Models (LLMs) as part of the red/blue team.
- Conducting adversarial testing and prompt injection experiments to identify vulnerabilities in LLM deployments.
- Collaborating on designing evaluation benchmarks and safety guardrails to improve model alignment.

Projects

FloatChat – ARGO Ocean Data Explorer | *Python, Streamlit, PostgreSQL, FAISS, Gemini* — Link

- Built a RAG pipeline converting natural language queries to SQL using Groq API with FAISS vector search for semantic retrieval from 1.27M oceanographic measurements.
- Implemented Model Context Protocol (MCP) with 9 specialized tools for thermocline calculation, water mass identification, and spatial analytics on ARGO float data.
- Developed interactive Streamlit dashboard with 5 tabs, Leaflet maps, NetCDF data ingestion, and cloud PostgreSQL (Neon) integration.

AI Bouncer | *Python, FastAPI, XGBoost, FAISS, Hugging Face, Next.js* — Link

- Developed an enterprise-grade LLM firewall to detect jailbreaks and zero-day attacks using a multi-layered ensemble pipeline.
- Implemented semantic attack matching with FAISS vector search and statistical probability scoring using an XGBoost engine.
- Built a decoupled architecture with a Next.js frontend and a Python-based ML engine to intercept and sanitize malicious prompts.

TrustLens — AI Review Verification System | *Python, FastAPI, React, LangGraph, Groq Cloud* — Link

- Built an end-to-end LangGraph multi-agent review verification system to detect fake reviews, verify purchases, analyze reviewer behavior, identify duplicate reviews, and assess media authenticity.
- Integrated Llama 3.3 for text reasoning and Llama 4 Scout Vision for image analysis with a SQLite orders database for purchase verification, generating a 0–100 Trust Score with Approve, Review, or Reject recommendations.

Plant Disease Classification Web Application | *PyTorch, Flask, JavaScript, Gemini API, HTML/CSS* — Link

- Developed a deep learning web application to identify plant diseases from leaf images across 9 crops.
- Implemented EfficientNet-B2 with attention mechanisms for robust detection under varying conditions.
- Designed a responsive UI with image upload, dark mode, multilingual support, and Gemini-powered disease insights.

Extracurricular

Microsoft Student Chapter and Geek Room
Development Trainee — *Sep. 2024 – Present*

No Soul Hungry
Volunteer — *July 2024 – Present*

- Participated in food drives to provide meals to underprivileged communities.

Technical Skills

Languages: Python, C/C++, HTML/CSS
Frameworks and APIs: FastAPI, Flask, Streamlit, Postman
Libraries: LangChain, Hugging Face Transformers, TensorFlow, PyTorch, Keras, OpenCV, Pandas, NumPy, Matplotlib
Developer Tools: Git, Docker, Render, Vercel, VS Code, Jupyter Notebook, Google Colab
